Define the Problem Statements

Date	06 May 2023
Team ID	NM2023TMID15400
Project Name	Industrial Workers Health and Safety System based on Internet of Things
Maximum Marks	2 Marks

Customer Problem Statement Template:

Lack of Personalized Safety Measures: Every worker has different health and safety requirements. Existing systems often lack the ability to provide personalized safety measures based on individual worker characteristics and conditions. Industrial companies need a solution that can monitor workers' vital signs, fatigue levels, and exposure to hazardous substances, and provide real-time feedback and recommendations tailored to each worker's needs.
